

The Inconjunct & Quincunx Aspects

Planetary aspects are a horizontal action, a process *between* planets (*not between* planets and terrestrial organisms) rooted in the natural paradigm of Sight.

Modern inconjuncts and quincunxes have their genesis in traditional notions of *aversion* or *of being “turned away” from one another*, giving rise to modern interpretations that include *stress, strain, adjustment, discord, distraction, etc.*

One method of resolving this conundrum of an aspect is through the inclusion of a *third party*, as long as said third party can “*see*” both ends of the inconjunct or quincunx aspect (through the five traditional aspects.) This third party will be in either a *sextile/square* or a *square/trine* relationship to the inconjunct or quincunx configuration.

A second method for resolution involves an analysis of the planetary lord energy flow of the inconjunct or quincunx planets. The goal of this analysis is to map alternate routes for reaching resolution - should the requirement arise.
